Reply to Attn of: EA3-09-033

TO: JB/Supply and Equipment Management Officer

FROM: EA3/AMS Project Manager

SUBJECT: Temporary Storage Review – Case Files 06-001, 07-003 and 07-010

The AMS Project Office has reviewed the temporary storage items included in the subject case files and has determined that a number of stored items are no longer needed and will be offered to other JSC organizations or excessed. The Alpha Magnetic Spectrometer Payload is scheduled to launch in July of 2010. We are currently in the middle of assembly and integration of the AMS Payload in Geneva, Switzerland. Due to schedule and manpower constraints, disposition of all items contained in the case files cannot be accomplished at this time. Testing of the Payload is scheduled to begin in late December and the demands on our logistics engineer are expected to abate. We intend to begin the task of removing those items we have identified as useful to the project at that time and either transferring or excessing the rest. With that in mind, this office requests an extension of the storage period of 6 to 12 months.

A handwritten signature in black ink, appearing to read "Trent Martin".
